WASTE MANAGEMENT IN

 

copyright.waste-viet.com last update: 5. 2. 2007

SWOT analysis (main points)

- Waste management is focused mainly on the most complicated areas (hazardous waste, municipal waste in most populated areas)
- The legal framework for waste management area contains very modern components
- Problematic environmental law implementation
- There is missing introduction of basic principles of waste management into practice in most cases
- Need to improve structure of waste management (sanitary landfills, facilities for waste recovery)
- Lack of financial means and problematic cohesion of financial flows
- Low environmental awareness of citizens

Conclusions I

Main goal in WM: health protection of citizens

Particularly aimed at:

- hygiene
- food chain

- prevention of transferring pollution from one component of environment to another (solid waste – waste water – air emissions)

Conclusions II

Particular trends:

➤ *Legislative*

- Provide with more efficient law enforcement in WM (controlling and sanction)

➤ *Administrative - technical*

- Complexity of new investment projects

➤ *Financial and economic*

- Determination of priority in ecological investment

- Project financing

➤ *Education*

- Training needs (technical, enterprise management,...)

- Public campaigns (priority children and teenagers)

Thank you for your attention!
